

Website Brief: Biofarm Habitat Bank Hub

Project overview

We want to create a Habitat Bank Hub on the Biofarm website that showcases every registered Biofarm Habitat Bank. The Hub should help developers and planning professionals identify suitable habitat banks, understand the habitats available, and make informed purchasing decisions. It should move beyond downloadable brochures to provide an engaging, searchable, and informative digital experience.

While the primary audience is developers, the Hub should also strengthen Biofarm's proposition to landowners and farmers considering Biodiversity Net Gain by demonstrating the quality of our habitat banks, ecological outcomes and long-term stewardship.

Objectives

- Help developers identify the most appropriate habitat bank.
- Clearly communicate where each habitat bank is located and the locations it serves.
- Showcase available habitat units and habitat types.
- Build confidence in the quality, integrity and long-term stewardship of every Biofarm habitat bank.
- Reinforce Biofarm's expertise and credibility.
- Demonstrate the quality of Biofarm's delivery to prospective landowners and farmers considering BNG.

Audience

Primary: Developers, planning consultants, ecologists, environmental consultants and project managers.

Secondary: Landowners, farmers and estates considering Biodiversity Net Gain.

Habitat Bank Hub

The Habitat Bank Hub should act as the central destination for all registered Biofarm habitat banks, encouraging users to browse, compare and explore before progressing to individual habitat bank pages.

User journey and navigation

One of the key challenges for this project is how the Habitat Bank Hub is organised and presented.

Location should be the primary organising principle, as it is a primary driver to purchasing decisions, but we're deliberately not prescribing how this should work. We'd like you to consider the most intuitive and scalable approach.

Biofarm currently has six registered habitat banks. While this is our current portfolio, our

capability extends beyond these sites and our registered network will continue to grow.

The challenge is to create an MVP that showcases our existing habitat banks effectively without making the overall proposition feel geographically limited. Users should always leave with confidence that Biofarm can help, whether through one of our registered habitat banks today or through our wider delivery capability.

Please recommend a simple, scalable approach that works for today's portfolio and can evolve as additional habitat banks are registered.

As part of your response, please provide desktop and mobile wireframes for both the Habitat Bank Hub and the Sleight Farm habitat bank page before development begins.

Individual habitat bank pages

- Hero section with key facts and imagery
- Overview
- Interactive map showing the habitat bank location and areas served
- Habitat units and habitat types
- About the land and its legacy
- Ecological ambition and long-term stewardship
- Photography and gallery
- Related habitat banks
- Clear calls to action

SEO and content

Create authoritative pages with natural keyword integration while maintaining Biofarm's tone of voice. Optimise page titles, meta descriptions, headings, image alt text and URLs. Build internal links to habitat bank brochures, Sleight Farm ecology stories, maps, Biodiversity Net Gain pages, case studies, related habitat banks and Contact Us.

Design

Reflect the Biofarm brand visually and verbally. Use premium landscape photography, intuitive navigation, engaging storytelling and mobile-first design. Avoid recreating brochure PDFs online.

Delivery approach

Phase 1 (MVP): Design and build the Habitat Bank Hub alongside a flagship page for Sleight Farm. Use this to establish the design system, content structure and user journey.

Phase 2: Roll out the agreed template across the remaining registered habitat banks, refining based on learning.

Success measures

- Increase engagement with habitat bank content.
- Generate more qualified developer enquiries.
- Build confidence amongst prospective landowners.
- Demonstrate Biofarm's leadership in habitat delivery and stewardship.
- Provide a scalable platform as the habitat bank portfolio expands.
